DETAILED ACTION

1. Claims 1-8 are allowed.
2. The following is an examiner's statement of reasons for allowance: prior art fails to teach or fairly suggest a recording and reproducing apparatus comprising a memory for at least three frames; a first readout means for reading video data from the memory based on the synchronizing signal; a second readout means for reading video data from the memory based on a free-running synchronizing signal generated separately; and a page management means for performing management of frame pages in the memory by at least controlling the timing of writing video data into the memory and the timing of readout, based on the synchronizing signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Konda et al. (U.S. Patent Application Publication 2005/0190296) – frame shuffle portion (225), for every three frames, replaces positions of image frames within the three frames that is, performs frame shuffling, based on a control command for controlling processing to be performed by its own processing

portion, said control command being included in these separated and obtained control commands, for each frame.

b. Saito et al. (U.S. Patent Application Publication 2003/0123842) - discloses a process of shuffling based on the bank scheme using memory for two frames and that using memory for three frames, when the period of writing and that of reading differ from each other.
